

How Geopathic Stress Negatively Affects the Human Body!

Written By Univ.-Prof. Dr. Gerhard W. Hacker: Head, IGGMB – Research Institute for Frontier Questions of Medicine and Biotechnology, Salzburg, Austria

At locations where Geopathic stress zones are present, subsurface water plays a predominant role, either as lakes, slowly moving underground water, or as water streams. Water underneath the surface does interfere with the human body, which also contains its own water in a special form (the human body is 70% water). Water from "below ground" affects the human body in several ways: Similar to a current transformer, information from one water source can be transcribed to the other water source and change the "human energy field" (HEF). Also, metal ions moved by water can induce small intensity broadband electromagnetic fields (EMF). These "EMFs" increase the "background noise" levels and interfere with physiologic processes in our body, that in part, rely on electromagnetic phenomena, such as membrane ion channels, or pacemaker regions in the brain or heart. Using a randomized double-blinded trial^{*}, it has been scientifically shown that Geopathic stress zones do cause chronic stress and therefore can weaken the body's defence systems.

Technical electromagnetic fields can also drastically affect the human body, as soon as certain field strengths are reached. There is clear indication that a combination of technical fields and Geopathic stress zones can multiply the effect and therefore become extremely harmful to all living beings. In that context, various structures in the human body play a role, e.g. incredible numbers of tiny magnetite's (nano-magnetos) present in our brain, various nerve cell and muscle related structures, and even protein functions can be modulated. Finally, this stress, in combination with a possible suppression of certain functions of the immune system, may even lead to the development of cancer.

Results of spending time over Geopathic Stress Zones:

- Geopathic Stress Zones weaken the human organism
- Leads to stress; long lasting stress turns into chronic distress and disease
- Clear indication that Geopathic Stress weakens the immune system, cardiovascular system and others.
- Sleeplessness (insomnia): No relaxation, weakening the immune system and furthering aggressive behaviour.
- Health Facilities: Healing does not work well when the body is continually subjected to Geopathic Stress.
- Wellness-centres/ spas: Success of therapy and stress-management depend on location of beds being free from Geopathic stress.
- Athletes: The winners have slept well.
- Schools, Kindergartens, offices, etc.: Aggression and interpersonal relationships vary based on location of the person's sleeping bed and desk, among others.
- Economy and work place: Decreased performance, increased probability of employee's getting illnesses, sick days, etc.
